

NEW IRIS LOGON PROCESS

If you are an IRIS end user, the way you access your SAP Windows desktop application is changing, and we want to do all we can to help you successfully adopt this change.

WHAT...IS THE BENEFIT?

- It provides enhanced security measures!
- It protects you more!
- It protects the University's data!
- It helps IRIS remain current with industry standards and best practices!

WHO... IS IMPACTED?

True IRIS end users (that's about 3,500 of you across the State). If you have the Windows SAP desktop application and log on to it to do your IRIS work, you will be impacted.

WHAT... IS CHANGING?

The way you log on to the system will be different. If you try to log on to your desktop application after the change has been made, you will be prompted with the following error: "The system does not let you log on using a password."

WHAT... IS NOT CHANGING?

- IRIS functionality is not changing.
- The version of the IRIS software is not changing.
- Your access is not changing.
- It's the exact same software that runs on your machine today.

WHEN... IS THE CHANGE HAPPENING?

On the evening of Wednesday, June 10th. When you come into work on June 11th, the change will be in place.
